

News Release

April 4, 2016

BankVOD, the global leader in automated banking asset analytics has partnered with Forest Rim Technology, to demonstrate how their combined technologies can help companies gain a 360 degree view of their data as never before. This groundbreaking technology will allow users to gather insights from multiple data sources so they can make data driven decisions and optimize corporate and brand management.

Use Cases for this Data Due Diligence tool are as follows:

KYC: Know Your Customer

KYE: Know Your Employees

MYRC: Manage Your Regulatory Compliance

AMP: Automate Manual Processes

CE: Customer Experience

PL: Preventive Litigation

BankVOD and Forest Rim Technology have created a solution to convert unstructured data in the form of text, into a database that then can be analyzed for insight. Combined with series of dashboards to visualize enormous volumes of unstructured data found throughout corporate enterprises.

Quote from Tim Portley, Co-Founder and Managing Partner of BankVOD: “We are thrilled to be working with Bill Inmon, a world renowned Data Scientist and Top 10 most influential people in the first 40 years of computing. The scale, throughput, and performance of Textual ETL combined with our rapid-fire banking analytics, allows dynamic visual analysis of multiple and varied data-sources. A world of promise and opportunity in information is buried in the unstructured textual data. [BankVOD's Data Due Diligence](#) will give you a decided edge over your competitors by accessing the unstructured textual data in your entire organization quickly and easily.”

Quote from Bill Inmon, Forest Rim Tech:

"In a day and age where competition is around every turn, banks are increasing finding that listening to your customer is more important than ever before. With new advances in textual technology it is now possible to hear both the sentiment of the customer AND why the customer has that sentiment. The insight that can be gained from listening to the customer is such that now the banking organization can retain customers and keep them happy. BankVOD is an ideal partner with their long standing relationships with many of the leading financial institution and position as the premier banking data risk analytics provider "

Forest Rim Technology is a Castle Rock, Colorado company founded in 2003 by Bill Inmon. Forest Rim Technology is a pioneer in creating a software technology known as TextualETL™. TextualETL™ is a powerful NEW technology that takes raw, unstructured text, uses textual disambiguation© and other concepts to deliver the desired data in a standard relational database, ready for consumption or analysis. Gartner named FRT “Cool New Technology Company for 2015 - Data Integration & Quality”
